

ManEx Minute

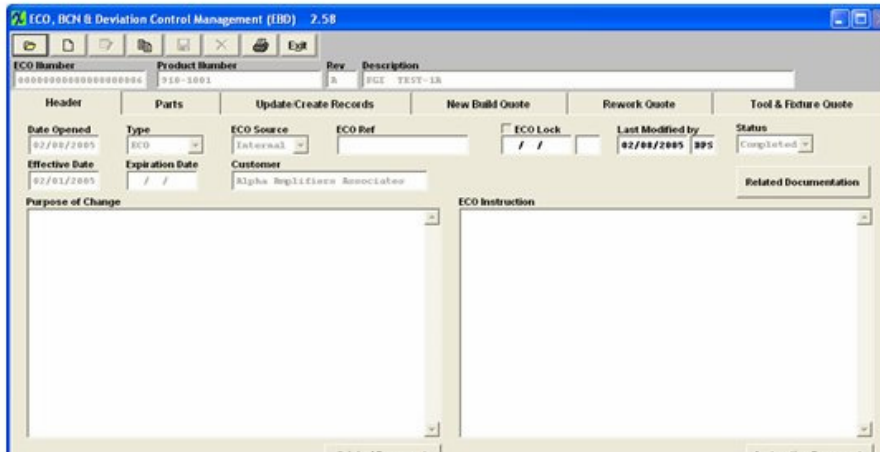

Take a minute to save time with ManEx.

Dear Valued Customer,

Did you know that ManEx gives you the ability to track and manage Engineering Change Orders (ECO), BoM Change Notices (BCN), and Deviations for all production assemblies?

Contract Manufacturers have the unique task of procuring, producing, and shipping assemblies that are developed and frequently updated by external organizations. Depending on the customers, these changes can be frequent, complex, and expensive to maintain.

The optional ECO, BCN, & Deviation Control (EBD) Module allows users to track all assembly changes, update existing BOMs, SOs and WOs, and track prices for future orders using the new update from one easy to use module.

It may not be possible to eliminate the changes generated by customers, but it can be easier to manage those changes while maintaining control and profitability.

For more information on the EBD module please refer to the [ECO, BCN, & Deviation Control \(EBD\) Manual](#), or the [online description](#) of the module.

This is just another way we are developing ManEx with YOU in mind.

Sincerely,

David Sharp
