

ManEx Minute

Take a minute to save time with ManEx.

Dear Valued Customer,

Did you know that ManEx gives you the ability to load the material type for each manufacturer part number through the BoM Import Module (QBI)?

Mfg	MPH	AVL Qty on Hand	Pref	Mat
GENE		0.00	39	Wak
MOTOROLA	MC7905BD2T	0.00	39	LF-P

Within the Inventory Control Management Module, users are able to track the material type by manufacturer part number. This information is then displayed in many places throughout ManEx. Suppliers will be able to see it on the PO, receiving can see it at the time of receiving. This allows your suppliers, purchasing, receiving, and inventory to collaborate together so everyone involved knows if the part is Lead Free (LF) RoHS Compliant (RoHS), or some other designation.

Although this information is critical for managing customer assemblies, it previously required users to enter the information manually for each part number. With the

latest version of ManEx, users are able to quickly load this information through the QBI module. As each new assembly is loaded and new parts are created, the material type can be specified saving hours of time updating parts after they are created.

As the RoHS deadline approaches, this time saver is critical to help ensure you will be ready in time.

For more information on the Shop Floor Setup please refer to the [BoM Import Management Manual](#).

This is just another way we are developing ManEx with YOU in mind.

Sincerely,

David Sharp
Regional Vice President
