

ManEx Minute

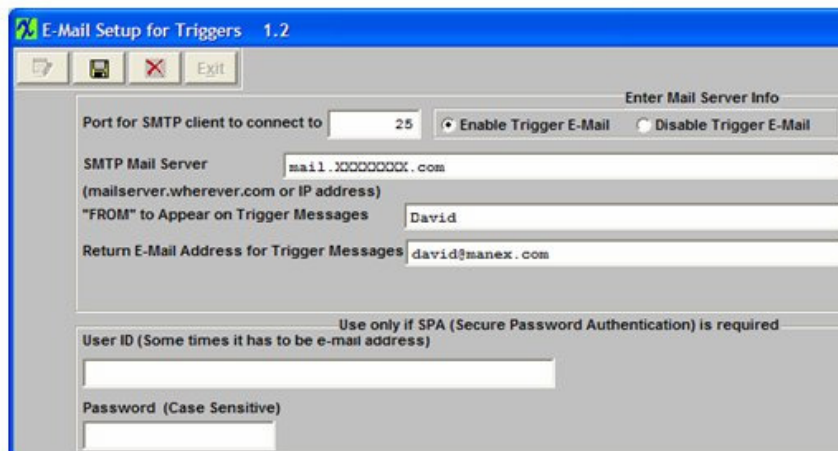

Take a minute to save time with ManEx.

Dear Valued Customer,

Did you know that ManEx can automatically notify us of any system errors you encounter?

By configuring and enabling the triggers in ManEx, each week your system will send us a list of system errors you encountered during the previous week. We review those logs from each of our customers, and will take action to prevent them in the future. Often, we are able to correct such conditions before our customers realize and report on the problem. Also we can advise you of system problems at your company like not enough disk space, or network issues.

To setup this automatic notification you need to open Trigger.exe in the main ManEx directory. From there, select Email Setup and configure the system according to your email server settings. You can also test the settings to be sure it is working.

Once it is configured correctly, you only need to be sure the trigger is running on Monday nights. This will enable it to automatically send us the error log and purge these error files from your system.

For more information on automatic triggers, please refer to the [Trigger](#) Manual.

This is just another way we are developing ManEx with YOU in mind.

Sincerely,

David Sharp
Regional Vice President

ManEx, Inc.
